| ESG-Integration | Yes |
| | The Investment Manager's approach to ESG integration in its investment analysis draws upon both internal and external sources. The Investment Manager may invest in companies with poor ESG ratings where the company has shown to have good governance and meet the impact and sustainability characteristics outlined above. The ESG scores are also used to identify where active engagement with companies by the Investment Manager and EOS would be useful, with the aim of reducing underperformance from poor ESG behaviours while also encouraging companies to act responsibly and improve their sustainability characteristics. The percentage of companies in the Fund that are analysed for sustainability characteristics will always be between 90%-100%. |

| | The Investment Manager's process begins with a thematic framework whereby it has identified six themes that have a direct impact on biodiversity: land pollution, marine pollution and exploitation, unsustainable living, climate change, unsustainable farming, and deforestation. Each theme consists of a number of sub-themes which correspond to at least one of the United Nations Sustainable Development Goals. The industries within each sub-theme represent the initial investible universe for the Fund. For example, the land pollution theme consists of the following investible industries: waste management, plastic recycling and plastic alternatives, and hazardous chemical management. |
